

IN THE CLAIMS:

Please amend Claims 1 and 4 as shown below.

1. (Currently Amended) A shielded cable comprising:
first signal wires for transmitting digital signals of a relatively high frequency;
second signal wires for transmitting digital signals of a relatively low frequency; and
an outer shield a conductor with which said first and second signal wires ~~bundled in a state of being electrically insulated from each other~~ are collectively covered,
wherein each of said first and second signal wires is bundled in a state of
being electrically insulated from each other with an insulating sheath, and
wherein said first signal wires are placed adjacent to said outer shield ~~conductor~~ and adjacent ~~one~~ to one another.
2. (Original) The shielded cable according to claim 1, wherein said first signal wires are twisted pairs.
3. (Original) The shielded cable according to claim 1, wherein a clock signal of 10 MHz or higher and a plurality of data signals synchronized with the clock signals are transmitted through said first signal wires.

4. (Currently Amended) The shielded cable according to claim 1,
further comprising connectors for connection at its opposite ends, each of said connectors
having connector pins being connected to said first and second signal wires, said first
signal wires being connected to particular ones of the connector pins which are adjacent
one to one another.
